INDEX TO SCIENTIFIC NAMES CITED IN TAXON

VOLUME 34, 1985

Family names given originally in languages other than Latin have been treated as though they were in Latin.

All appearances of scientific names have been included in the index, including names used in figures, in figure captions, and in tables.

New names and new combinations are indicated by the appropriate abbreviations following the entries; but we have not exercised great care in picking these out, in the belief that an index is not a primary source of nomenclatural information.

This index was originally keyed into a database program with a specially-written supplementary program. The supplementary program contained a flaw which prevented its running. The data (some 8300 records) were exported to and sorted in a word-processing program, and the duplicate entries were combined one line at a time on screen. The editing process cannot have been perfect, but we dare to hope the reader will nonetheless find this index helpful and useful.
